

Assignment one MS ACCESS

Here's how to complete the tasks in Microsoft Access step by step based on the requirements:

a. Create the tables

1. Follow the steps in my earlier instructions to create the five tables:
 - Staff
 - Branch
 - PropertyForRent
 - Client
 - Registration
 2. Enter the data provided in the assignment into the respective tables.
-

b. Create a data entry form for each table

1. Go to the "Create" tab and select **Form Wizard**.
2. Choose the table (e.g., **Staff**) you want to create a form for.
3. Select all fields to include in the form.
4. Follow the wizard to design the form.
5. Repeat this for each table.

Add the following commands to your forms:

- **Add New Record Button:**
 - Open the form in Design View.
 - Go to the "Design" tab and select the **Button** control.
 - Place the button on the form and choose **Record Operations → Add New Record**.
 - **Go to Previous Record Button:**
 - Add another button.
 - Select **Record Navigation → Go to Previous Record**.
 - **Close Form Button:**
 - Add another button.
 - Select **Form Operations → Close Form**.
-

c. Create a query named `staff_salary`

1. Go to the "Create" tab and select **Query Design**.
 2. Add the **Staff** table to the query.
 3. Select the fields:
 - **staffNo**
 - **Name**
 - **position**
 - **sex**
 - **SALARY**
 4. Save the query as **staff_salary**.
-

d. Create a query named `properties`

1. Add the **PropertyForRent** table to the query.
 2. Select the fields:
 - **propertyNo**
 - **type**
 - **rooms**
 - **ownerNo**
 3. Save the query as **properties**.
-

e. Create a query named `s001_details`

1. Add the **Staff** table to the query.
 2. Select all fields from the Staff table.
 3. Add a criterion for **staffNo**:
 - In the **Criteria** row under the **staffNo** field, type "s001".
 4. Save the query as **S001_details**.
-

f. Create a query named `location`

1. Add the **Branch** and **PropertyForRent** tables to the query.
2. Select the fields:
 - **branchNo**
 - **city**
 - **propertyNo**
 - **ownerNo**

3. Save the query as **location**.
-

g. Create a query named B004_details

1. Add the **Staff** and **PropertyForRent** tables to the query.
 2. Create a relationship between the **BRANCHNO** fields.
 3. Select the fields:
 - **staffNo**
 - **Name**
 - **position**
 - **propertyNo**
 - **rooms**
 - **ownerNo**
 4. Add a criterion for **BRANCHNO**:
 - In the **Criteria** row under **BRANCHNO**, type "B004".
 5. Save the query as **B004_details**.
-

h. Create an update query for Sheila's name

1. Go to the "Create" tab and select **Query Design**.
 2. Add the **Client** table.
 3. In the **Query Type** section, select **Update Query**.
 4. Drag the **Name** field to the grid.
 5. In the **Update To** row, type "Mary".
 6. Add a criterion for the **Name** field:
 - In the **Criteria** row, type "Sheila".
 7. Save the query as **Update**.
-

i. Query for clients whose name ends with "A" (queryA)

1. Add the **Client** table to the query.
 2. Select all fields.
 3. Add a criterion for **Name**:
 - In the **Criteria** row, type Like "*A".
 4. Save the query as **queryA**.
-

j. Query for staff whose name starts with "N" (queryN)

1. Add the **Staff** table to the query.
 2. Select all fields.
 3. Add a criterion for **Name**:
 - In the **Criteria** row, type Like "N*".
 4. Save the query as **queryN**.
-

k. Create a report for total salary paid to employees

1. Go to the "Create" tab and select **Report Wizard**.
 2. Add the **Staff** table to the report.
 3. Use the **SUM** function for the **SALARY** field:
 - Open the report in Design View, right-click the **SALARY** field, and select **Totals** → **Sum**.
 4. Save the report.
-

l. Create a macro to quit the application

1. Go to the "Create" tab and select **Macro**.
2. In the first row, select **QuitAccess** from the dropdown.
3. Save the macro as **Macro_quit**.
